

# Day 11

# Agenda

- ▷ Explore auto layout properties
- ▷ Using auto layout
- ▷ Explore component properties
- ▷ Create components to reuse in designs
- ▷ Create and use variants

# Individual assignment: Create components (5%)

## ▷ Objective

- To be able to use Figma application to create the components for final project.

## ▷ Instructions

- For **each team member**, use Figma to **create a component with at least 2 variants** that will be used in your final project.
- Once finished, demonstrate to the instructor how to create them.
- After that, insert picture, name of creator, annotations, short description of each component in your worksheet.
- **Note:**
  - A team is required to have at least 4 components.
  - You can insert more slides in the worksheet (if any).

# Individual assignment: Create components

## Grading Criteria

- 0 = No submission
- 1 = Component is incomplete, or no variant is created, or can't demonstrate how to create the component.
- 3 = Component and its variants are created but can't clearly demonstrate how to create them.
- 5 = Component and its variants are created and can clearly demonstrate how to create them.

# Components for final project (1)

---

Replace this message by the picture  
of component 1 and its variants.

Short description of component  
(Creator ID and name)

Replace this message by the picture  
of component 2 and its variants.

Short description of component  
(Creator ID and name)

## Components for final project (2)

---

Replace this message by the picture  
of component 3 and its variants.

Short description of component  
(Creator ID and name)

Replace this message by the picture  
of component 4 and its variants.

Short description of component  
(Creator ID and name)

# Q&A
