Prototype animations

...

 Users on [any team or plan](#).

 Users with **can edit** access can create prototypes.

New to Prototyping? Check out our [Getting Started with Prototyping](#) guide.

Animations can be used to create smooth transitions between pages and define the behavior for actions like expanding a menu, swiping between pages, or opening a gallery.

Instant

The Instant transition will immediately display the **Destination** Frame, when the hotspot is interacted with (clicked, hovered over, or pressed).

Help

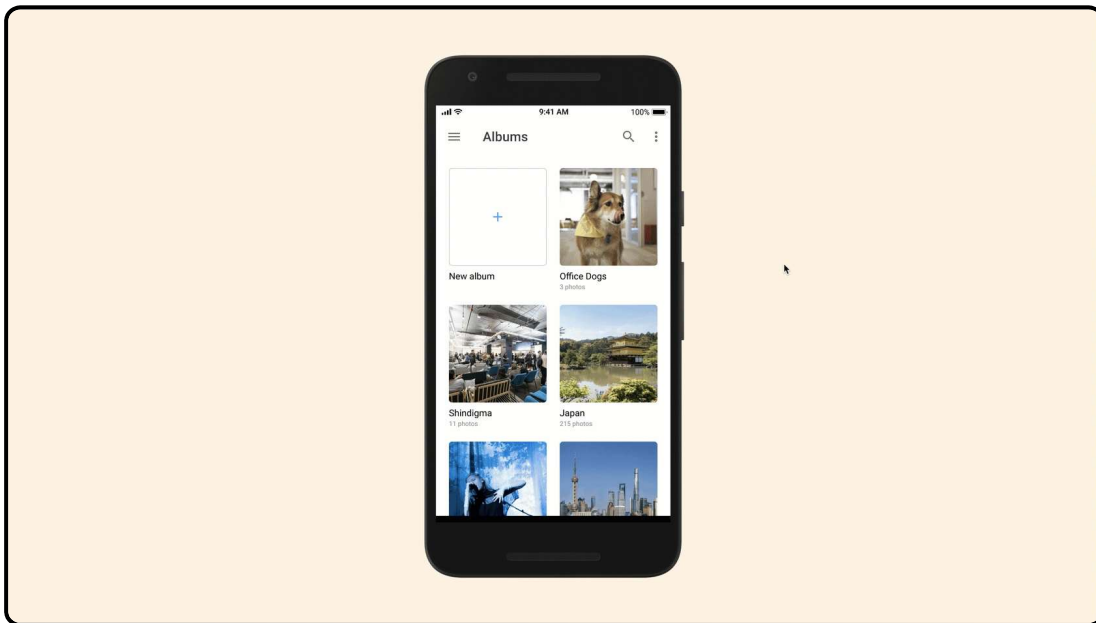

Figma Learn

frame.

Supports:

- Duration
- Easing

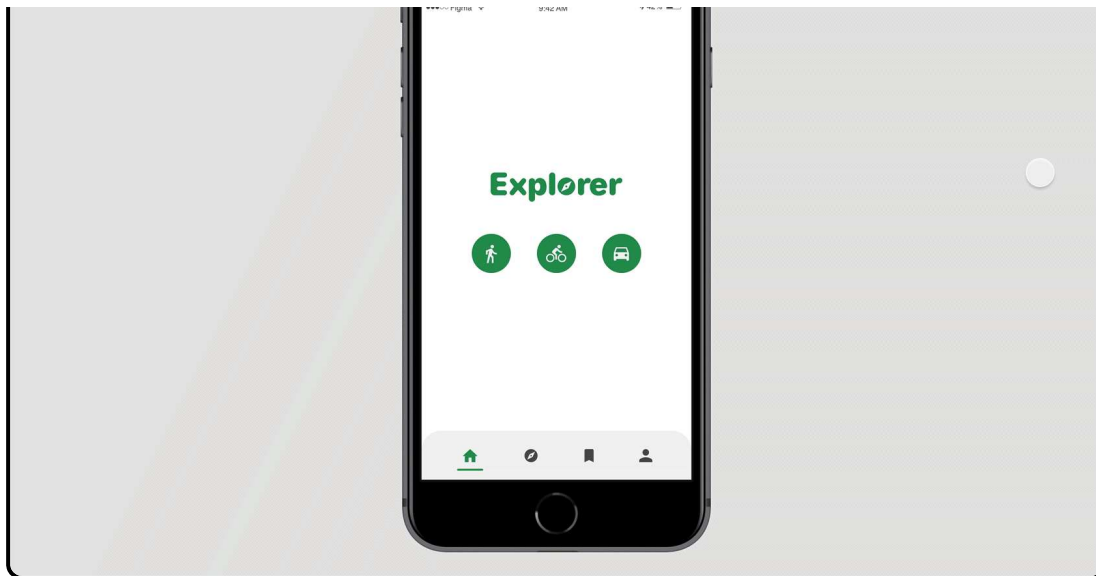

Smart Animate

Smart Animate looks for matching layers that exist across multiple frames. For layers that match, we recognize what's changed and apply transitions to seamlessly move between them.

Supports:

- Duration
- Easing

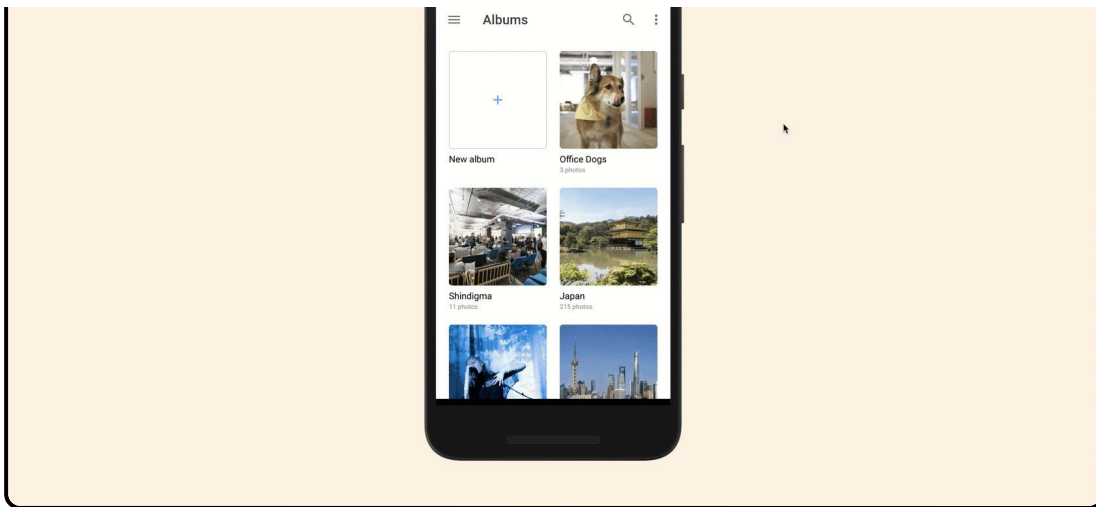

Move In / Move Out

The Move transition will slide the **Destination** frame **into** or **out of** view, above the original frame.

Supports:

- Easing
- Direction
- Duration

Figma Learn

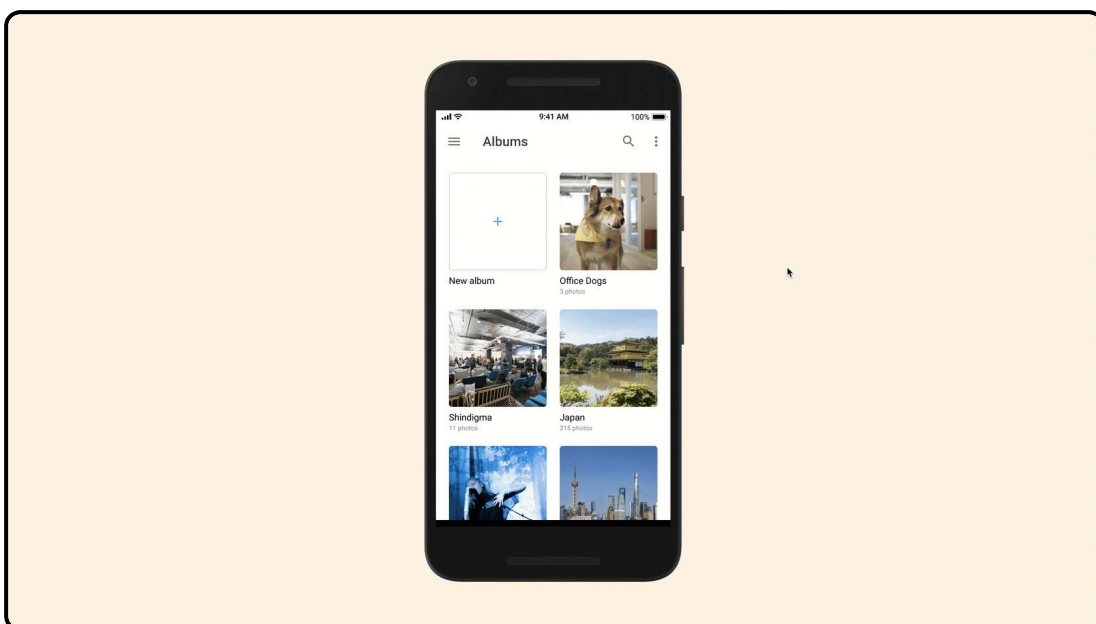

Push

The Push transition will push out the original frame, as the **Destination** frame is moved into view. This is the perfect transition for replicating a swiping gesture.

Supports:

- Direction
- Easing
- Duration
